

## PRESS INFORMATION

# BERLIN HEART AT A GLANCE

Berlin Heart GmbH develops, manufactures, and markets innovative ventricular assist devices (VADs) for mechanical circulatory support. Through the EXCOR® Adult and the EXCOR® Pediatric, Berlin Heart is the only company in the world capable of supporting patients of all ages and sizes, from infants to adults.

Berlin Heart's systems provide left ventricular, right ventricular, or biventricular support (both sides); EXCOR®, Berlin Heart's paracorporeal VAD has practically no competition in the field of biventricular circulatory support. The EXCOR® Pediatric, a product specially developed for children, is the only circulatory support system in the world approved for use in pediatric VAD therapy.

With its products, Berlin Heart is among the market leaders in the industry, and it holds itself to extremely high standards in terms of developing innovative solutions offering maximum reliability and precision.

The access to some or all shown products may be restricted by country-specific regulatory approvals. The use of EXCOR® VAD for adults, RVAD-support, Excor mobile and EXCOR® Active is not FDA-approved.
